Yun Fu

Yun Fu is an architect and scholar.

Yun believes architecture provides a particularly vibrant lens for thinking about and improving the ways we live together. He describes it as one of the few generalist professions left in the contemporary world, where the goal is a broad knowledge of many things instead of only specialised expertise in a narrow field.

His work and study have taken him to Sydney, Beijing, London, Boston, and Rome, where he held the Rome Prize at the British School at Rome and was the Confucius Scholar at Peking University. Yun's scholarship focuses on design thinking and the cerebral mechanisms of creativity and problem processing.

After leaving Christ's College, Yun studied architecture at UNSW Sydney before working in Beijing and London. He completed his graduate and doctoral degrees at Harvard University, with the latter focusing on post-disaster reconstructions. In 2018, Yun joined the faculty to develop the Advanced Urban Design curriculum, interrogating how we might think about our cities in the near future.
